

ILLUMINATING LIGHTING THE WAY INTERNALLY & EXTERNALLY

Illuminated signs are changing. It is no longer a just case of tubes or a couple of swan necked lamps. LED and halogen lighting systems have become more common in recent years alongside traditional neon and fluorescent lamps. With technology moving at such a pace, beautiful design styling and changes in local authority rulings; choosing your illuminated sign has become a more complex affair. Finding solutions, through knowledge, experience and design ability, JTP Signmakers can help you make the right choices and deliver your ideal requirements.

Edge lit internal display and point of sale is a case in point, where LED technology has enabled signmakers to illuminate precious objects in museums without causing any damage.

The cost of LEDs have reduced considerably because of the advances in the manufacturing process. The uses to which this technology can be put is endless; halo illumination for signs and individual letters, back lighting for light boxes, internal illumination for poster cases and with 12 volt halogen we become spoilt for choice. Luckily consultation is free, so get in touch.
